## Calculation of Risk Evaluation

**Severity of Risk** (S) is judged by evaluating the effects of the hazard if the risk occurs. This is evaluated as Minor = 1, Major = 2, Serious = 3.

**Risk Likelihood** (L) - The likelihood of the harm occurring is evaluated on the basis of: Unlikely = 1, Possible = 2, Likely = 3.

**Overall Risk** is calculated by multiplying the figure for Severity (S) and Likelihood (L).

The overall risk figure calculated is related to the Risk Level of either Low: 1 to 3; Medium: 4 to 6 or High: 7 to 9.

**NB** This is a generic risk assessment only. It is advisable to carry out a site-specific assessment prior to using this equipment.

The instructions recommended within this document apply to normal risk conditions. If the chainsaw is to be operated in a dangerous or hostile environment, the user/client is responsible for conducting an appropriate risk analysis and applying suitable controls to mitigate those additional risks.

This instruction should be read in conjunction with the Risk Assessment procedure for a Mig Welder

GENERAL SAFETY
- Safety glasses must be worn at all times in work area.
- Appropriate footwear with substantial uppers must be worn.
- Long and loose hair must be contained.
- Close fitting/protective clothing must be worn.
- A welding mask with correct grade lens for GMAW must be worn.
- A welding apron with correct grade protection must be worn.

POTENTIAL RISKS
- Burns & flying sparks
- Fumes and explosion from gas leak
- Radiation damage to eyes and body

TRANSPORT OF MIG WELDER
- Ensure unit is firmly tied down on transport vehicle without damaging unit, gas fittings & hoses

BEFORE STARTING
- Ensure no slip/trip hazards are present in work spaces and walkways
- Keep work area clean and free from grease, oil and other flammable material
- Gas hoses and work leads must be in good condition and not create a tripping hazard
- FAULTY EQUIPMENT MUST NOT BE USED. IMMEDIATELY REPORT SUSPECT EQUIPMENT
- Keep the welding equipment, work area and gloves dry to avoid electric shocks
- Ensure gloves and welding gun are in good condition
- Close UV curtains or erect safety screens

OPERATIONAL SAFETY CHECKS
- Ensure unit is correctly set up for current, voltage, wire feed and gas flow
- Ensure work return cable make firm contact to provide good electrical connection
- NEVER LEAVE WELDER RUNNING UNATTENDED
- Take care to avoid welding flashes
- Switch off unit when finished
- CLOSE GAS CYLINDER VALVE
- Hang up welding gun and welding cables
- Leave work area in a safe, clean and tidy state

INSPECTION AND MAINTENANCE
- Inspect fuel lines, tank, and area around carburettor for fuel leaks. Do not operate unit if leaks are found
- Ensure safety guards and other safety devices are fitted, secure and functioning.
- Check condition of the anti-vibration mountings of the handles.
- Ensure chain is sharp and correctly tensioned.

The above instructions must be followed at all times. If any of the instructions are not possible, contact the site supervisor for an assessment of any safety requirements.
